

Earthship Biotechture

European Lecture Tour 2016

With Michael Reynolds

What is an Earthship?
An Earthship is a state-of-the-art offered self-sustainable building that meets the six basic needs of every human individual: power, water, food, shelter, comfort and waste treatment.

Come and join acclaimed architect Michael Reynolds in his tour presenting Earthships and the latest findings in self-sustainable architecture and design.

- 10 October BERLIN TU Berlin
- 11 October HAMBURG Oberhafenquartier
- 12 October AMSTERDAM Ruigoord 76
- 13 October COLOGNE WISO Fakultät, Hörsaal
- 14 October FREIBURG Bürgerhaus Zähringen
- 15 October PARIS Venue TBC
- 16 October ANNAMASSE Auditorium
- 17 October MILAN Aquaworld
- 18 October BARCELONA Institute for Advanced Architecture
- 20 October REGENSBURG Kolpinghaus

Tickets are \$35 online. Please repurchase your tickets as we cannot guarantee tickets at the door.

“Imagine a home that heats itself, that provides its own water, that grows its own food. Imagine that it needs no expensive technology, that it recycles its own waste, that it has its own power source. And now imagine that it can be built anywhere, by anyone, out of the things society throws away. Thirty years ago, architect Michael Reynolds imagined just such a home- then set out to build it.”

About Michael Reynolds:

Ever since the first screening of the film Garbage Warrior in 2007, Michael Reynolds has been internationally recognized and acclaimed as leader and pioneer of self-sustainable building designs. For 45 years, he has worked on perfecting the art of “radically sustainable living” and designing “Earthships”, the only off-grid and completely self-sustainable buildings in the world today that present all the comforts of conventional homes and more. A true visionary, Michael Reynolds believes that in an age of ecological instability and impending natural disaster, his buildings can -and will- change the way we live.

About Earthships:

An Earthship is a state-of-the-art self-sustainable off-grid building that follows six basic principles, covering six basic human needs by:

- Heating and cooling through thermal mass to create a comfortable living environment without additional costs
- Using recycled and natural materials as building materials (dirt pounded scrap tires, cans, plastic bottles, etc)
- Collecting, harvesting and filtering rain water to provide drinking and wash water
- Using wind and solar energy to create electricity and light
- Producing its own food in an integrated greenhouse
- Containing and treating its own sewage and waste water without external contamination
